New Card+ Reference Labels

PBI Core Visual UPDATES

### | OCT- NOV'23

2019   **2020**   2021   2022

Recently Power BI came up with New Card visual, which is supposed to substitute the Old Card, KPI as well as multi-row card in the future. In first phase it let's you add Image along with Call out value and label. This Nov'23 they have introduced the most powerful feature of it and that is "Reference labels" Which will allow you display values for various comparable measures and indicators with 3 dynamic fields to make your storytelling more insightful and engaging.

Option 1

$267.98M NS $	**37.10%** GM %	**-0.85%** NP %
Net Sales ($)	Gross Margin	Net Profit
Last year: #B0BF1A +140.61% ↗	Last Year: 41.2% -9.95% ↘	Last Year: 2.21% -138.68% ↘

Implementation in BI 360 project

We can replace the KPI visual we have use on various pages with New Card visual and can show the comparison of each measure with Benchmark values and their variances to it through reference labels.

Features it offers:

- Call out value and labels with alignment options i.e. Right, Left and Centre.
- Accent bars to card, again with dynamic colour options.
- Cards with all various shapes and options for Fill & Border colours.
- Reference labels with dynamic fields. Title- Value- Details
- Image through various methods. Brows it or call measure through Image URL.

Build visuals with your data

Select or drag fields from the **Data** pane onto the report canvas.
